Medistance based a new generation of home healthcare services on the SAP Business One® application powered by SAP HANA®. Secure machine-to-machine health status data transfers increase patient comfort and security in drug and lifestyle management through instant diagnoses and adjustment made by doctors, and pharmacists from their offices.

Objectives

- Provide a single health status view of the patient, and share medical insights across practice collaboration
- Optimize patient engagement with increased and relevant information and transparency into care
- Improve patient safety and treatment outcomes, and reduce medical spend and administrative costs

Why SAP and HUNGIMPEX

- Secure data transport, storage, analysis, and connectivity to home healthcare devices
- Big Data insights linked to SAP® business applications that are widely used by healthcare professionals
- Remote, secure access to vital data that supports risk evaluation, treatment workflow, and administration management
- State-of-the-art in-memory technology platform with continually enhanced applications
- Remote interactive analysis and dashboard reporting within the Medistance-branded platform by HUNGIMPEX
- Analytics platform to perform Big Data real-time evaluations, cardiovascular risk reports, treatment workflows, and drug optimization based on clinical protocols
- Mobile access via Medistance Connect, and ConnectPro to real-time data in SAP HANA Cloud Platform

Benefits

- Increased healthcare service productivity with improved patient and drug management
- Measurable cost-efficiency evaluation of collaborative treatment workflow

“SAP Medistance provides always a clear overview of medicine related treatment workflow, daily health status of patients for us. We can share clinically valid information on the same mobile platform with the specialist to improve outcome of the personal treatment and follow up the related lifestyle management too”
