[www.medistance.com](http://www.medistance.com)

Medistance based a new generation of home healthcare services on the SAP Business One® application powered by SAP HANA®. Secure machine-to-machine health status data transfers increase patient comfort and security in drug and lifestyle management through instant diagnoses and adjustment made by doctors, and specialists from their offices.

## Objectives

- Provide a single health status view of the patient, and share medical insights across practice collaboration
- Optimize patient engagement with increased and relevant information and transparency into care
- Improve patient safety and treatment outcomes, reduce medical spend and administrative costs
- Save time, costs and labour resources with clinically valid remote monitoring and treatment

## Why SAP and HUNGIMPEX

- Secure data transport, storage, analysis, and connectivity to home healthcare devices
- Big Data insights linked to SAP® business applications that are widely used by healthcare professionals
- Remote, secure access to vital data that supports risk evaluation, treatment workflow, and administration management
- State-of-the-art in-memory technology platform with continually enhanced applications
- Remote interactive analysis and dashboard reporting within the Medistance-branded platform by HUNGIMPEX
- Analytics platform to perform Big Data real-time evaluations, cardiovascular risk reports, treatment workflows, and drug optimization based on clinical protocols
- Mobile access via Medistance Connect, and ConnectPro to real-time data in SAP HANA Cloud Platform

## Benefits

- Increased healthcare service productivity with improved patient and drug management
- Measurable resource-efficiency evaluation of collaborative treatment workflow, less unnecessary visits

"I am responsible for the success of the treatment, so I really need a constant follow up of the changes in my patient's health status. Medistance has brought more security, reliability, and efficiency to my practice. Now I am able to plan my activities and resources based on the routines of the system, which was impossible before."

Dr. Anikó Ambrus. General Practitioner in Dpt. of 3rd. district in Budapest
