Medistance based a new generation of home healthcare services on the SAP Business One® application powered by SAP HANA®. Secure machine-to-machine health status data transfers increase patient comfort and security in drug and lifestyle management through instant diagnoses and adjustment made by doctors, and specialists from their offices.

Objectives

- Provide a single health status view of the patient, and share medical insights across practice collaboration
- Optimize patient engagement with increased and relevant information and transparency into care.
- Improve patient safety and treatment outcomes, drug adherence, lower administrative costs
- Save time, costs and labour resources with clinically valid remote monitoring and treatment

Why SAP and HUNGIMPEX

- Secure data transport, storage, analysis, and connectivity to home healthcare devices
- Big Data insights linked to SAP® business applications that are widely used by healthcare professionals
- Remote, secure access to vital data that supports risk evaluation, treatment workflow, and administration management
- State-of-the-art in-memory technology platform with continually enhanced applications
- Remote interactive analysis and dashboard reporting within the Medistance-branded platform by HUNGIMPEX
- Analytics platform to perform Big Data real-time evaluations, cardiovascular risk reports, treatment workflows, and drug optimization based on clinical protocols
- Mobile access via Medistance Connect, and ConnectPro to real-time data in SAP HANA Cloud Platform

Benefits

- Increased healthcare service productivity during pharma. project with improved patient and drug management
- Measurable resource-efficiency evaluation of collaborative treatment workflow, controlled drug management

“Medistance gives the effective and reliable tool for overall countrywide healthcare monitoring approach to find the right decisions even on the higher level based onto the complex data analysis. It is mandatory to use this kind of platform for the accurate intervention, and planning at each level of the healthcare administration!”
